Best Gambling achieves PCI DSS

Best Gambling is pleased to report it has passed and become compliant with the Payment Card Industry's Data Security standards (PCI-DSS) version 3.2.

The certification affirms Best Gambling commitment to strong data protection and information management by building on the already achieved International Organisation for Standardisation ISO27001:2013.

About PCI-DSS: Payment Card Industry Compliance has become one of the watch words of Information Security today. PCI Data Security Standard is developed by PCI Security Standard Council, a group of top card issuers in the world including Visa, MasterCard, Amex, JCB, and Discover. The standard is noted as one of the most stringent security standards in the world and is a comprehensive set of standards that require merchants and service providers that store, process, or transmit customer payment card data to adhere to strict information security controls and processes. The certification involves verification of the implementation of a number of mandated control objectives that are specific to technology design, network and physical data security.

About Best Gambling: Best Gambling delivers an environment for gambling startups and scaleups to enter the regulated UK gambling market.

Best Gambling help customers launch their product whilst adhering to UKGC compliance for Gambling Regulations, AML, player protection, etc. In addition, Best Gambling provide the payment gateway, player accounts, data feeds (if needed) and other technically compliant knowhow to deliver a service and a host of other technical solutions.
